Institute of Cancer Research

According to the Times Higher Education league table compiled from the most recent Research Excellence Framework results, the Institute of Cancer Research (ICR) has an outstanding record of achievement going back more than 100 years and is currently the top-ranked academic institution in the UK for research quality.

Institute of Cancer Research Goal

Institute of Cancer Research's major goal is to make cancer-defeating discoveries. The institute works closely with its partner hospital, the Royal Marsden, to easily convert research into patient advantage. This bench-to-bedside approach has contributed to the ranking of the ICR and Royal Marsden among the world's top four cancer research and treatment centres. A global initiative to isolate cancer-related genes and create new medicines and therapies is being led by the ICR.

Institute of Cancer Research Excellence

World-class cancer research requires excellent education and training, with the next generation of cancer scientists and clinicians working alongside existing world leaders at the Institute of Cancer Research. The Institute of Cancer Research gives researchers the opportunity to obtain a PhD and practitioners the opportunity to work towards a clinical PhD or MD (Res). The MSc in Oncology program is also delivered to physicians wishing to specialise further. ICR students are granted degrees from the University of London and are part of the greater University of London network.

The Institute of Cancer Research has also recently formed a collaboration with Imperial College London to further dissolve barriers between different research areas, allowing new cancer diagnostic, monitoring and treatment technologies to be developed.

International Students & Researchers

The Institute of Cancer Research's workers and learners are drawn from a wide range of backgrounds, producing a diverse workforce full of the best and brightest minds. Around 30 percent of the ICR staff are from outside the UK, representing a total of 56 different countries; 36 countries are represented within the research student body.

Why Institute of Cancer Research

Key reasons for students applying was that the The Institute of Cancer Research is a world-class academic research center that provides supreme possibilities for creating a fulfilling career and collaborating with some of the finest researchers. In addition, I wanted to work in a place where I could do translational research and, thanks to its association with The Royal Marsden, the ICR is one of the few places that offers you that chance.
